

Jainish Sakhidas

TE3 – 65

Batch D

Subject: CN

Experiment 9

Aim:

To configure Linux FTP server using VSFTPD.

1. Set up anonymous access of FTP server.
2. Enable individual logins and add FTP users with Read- only access.
3. Transfer Files.

Installing the package: vsftpd

```
osboxes@osboxes: ~  
osboxes@osboxes:~$ sudo apt-get install vsftpd  
[sudo] password for osboxes:  
Reading package lists... Done  
Building dependency tree  
Reading state information... Done  
The following NEW packages will be installed:  
  vsftpd  
0 upgraded, 1 newly installed, 0 to remove and 64 not upgraded.  
Need to get 111 kB of archives.  
After this operation, 361 kB of additional disk space will be used.  
Get:1 http://us.archive.ubuntu.com/ubuntu/ trusty-updates/main vsftpd amd64 3.0.2-1ubuntu2.14.04.1 [111 kB]  
Fetched 111 kB in 1s (72.4 kB/s)  
Preconfiguring packages ...  
Selecting previously unselected package vsftpd.  
(Reading database ... 167462 files and directories currently installed.)  
Preparing to unpack .../vsftpd_3.0.2-1ubuntu2.14.04.1_amd64.deb ...  
Unpacking vsftpd (3.0.2-1ubuntu2.14.04.1) ...  
Processing triggers for man-db (2.6.7.1-1ubuntu1) ...  
Processing triggers for ureadahead (0.100.0-16) ...  
ureadahead will be reprofiled on next reboot  
Setting up vsftpd (3.0.2-1ubuntu2.14.04.1) ...  
vsftpd start/running, process 2578  
Processing triggers for ureadahead (0.100.0-16) ...  
osboxes@osboxes:~$
```

Changing directory towards etc folder and to edit the vsftpd config file

```
osboxes@osboxes:~$ sudo su
[sudo] password for osboxes:
Sorry, try again.
[sudo] password for osboxes:
root@osboxes:/home/osboxes# cd /etc
root@osboxes:/etc# nano vsftpd.conf
root@osboxes:/etc# nano vsftpd.conf
```

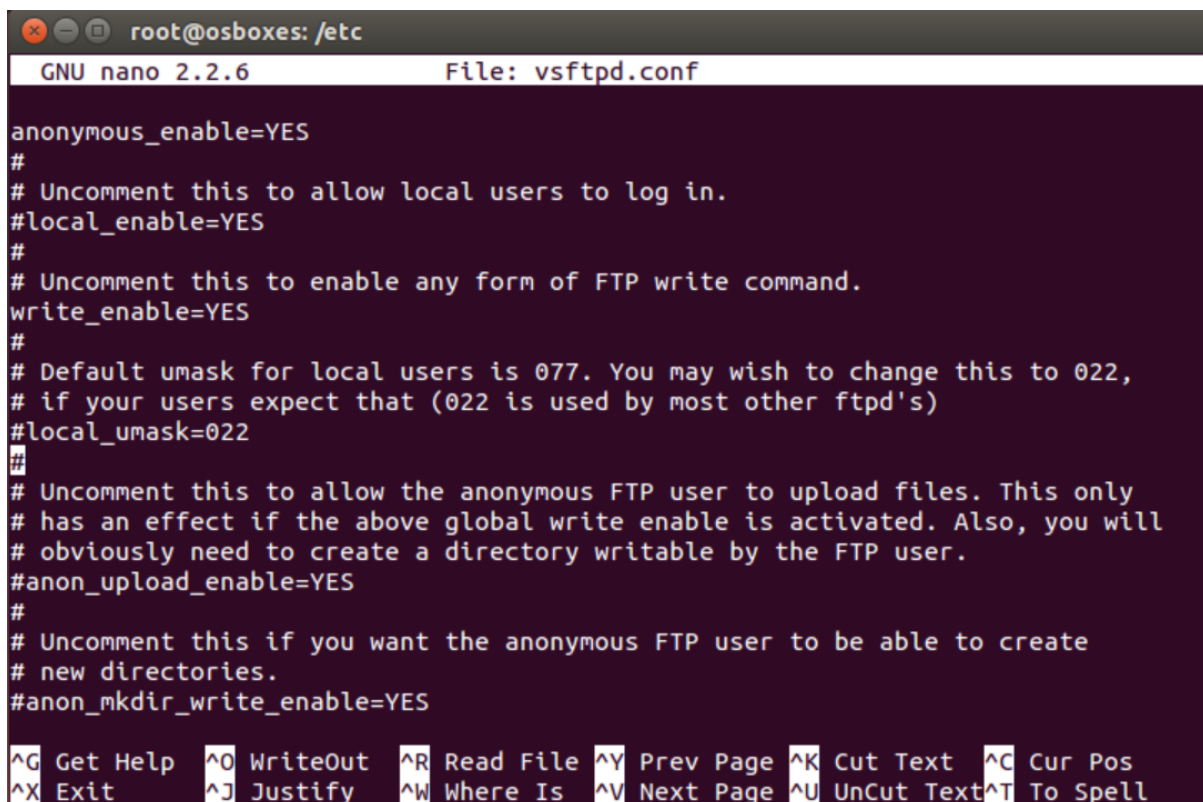

Making the anonymous_enable from NO → YES

Commenting out the line local_enable

Uncommenting out the line write_enable

Saving the changes by → ctrl+O and hitting enter

Exiting by → ctrl+X

```
root@osboxes: /etc
GNU nano 2.2.6 File: vsftpd.conf

anonymous_enable=YES
#
# Uncomment this to allow local users to log in.
#local_enable=YES
#
# Uncomment this to enable any form of FTP write command.
write_enable=YES
#
# Default umask for local users is 077. You may wish to change this to 022,
# if your users expect that (022 is used by most other ftpd's)
#local_umask=022
#
# Uncomment this to allow the anonymous FTP user to upload files. This only
# has an effect if the above global write enable is activated. Also, you will
# obviously need to create a directory writable by the FTP user.
#anon_upload_enable=YES
#
# Uncomment this if you want the anonymous FTP user to be able to create
# new directories.
#anon_mkdir_write_enable=YES

Restarting the vsftpd service → service vsftpd restart & Using netstat to check the working of ftp protocol service

```
root@osboxes:/etc# cd ..
root@osboxes:/# service vsftpd restart
vsftpd stop/waiting
vsftpd start/running, process 3184
root@osboxes:/# netstat -an|grep tcp
tcp        0      0 0.0.0.0:21          0.0.0.0:*           LISTEN

          collisions:0 txqueuelen:1
          RX bytes:113938 (113.9 KB)  TX bytes:113938 (113.9 KB)

root@osboxes:/#
```

Connecting my ip address with ftp and login as anonymous

```
root@osboxes:/# ftp 127.0.0.1
Connected to 127.0.0.1.
220 (vsFTPd 3.0.2)
Name (127.0.0.1:osboxes): anonymous
331 Please specify the password.
Password:
230 Login successful.
Remote system type is UNIX.
Using binary mode to transfer files.
ftp> pwd
257 "/"
ftp> bye
221 Goodbye.
root@osboxes:/#
```

Making the config file as it is

```
root@osboxes: /etc
GNU nano 2.2.6 File: vsftpd.conf

#
# Allow anonymous FTP? (Disabled by default)
anonymous_enable=NO
#
# Uncomment this to allow local users to log in.
local_enable=YES
#
# Uncomment this to enable any form of FTP write command.
#write_enable=YES
#
## Default umask for local users is 077. You may wish to change this to 022,
# if your users expect that (022 is used by most other ftpd's)
#local_umask=022
#
# Uncomment this to allow the anonymous FTP user to upload files. This only
# has an effect if the above global write enable is activated. Also, you will
# obviously need to create a directory writable by the FTP user.
#anon_upload_enable=YES
#

```

Now, adding a user

```
root@osboxes:/# adduser jainish
Adding user `jainish' ...
Adding new group `jainish' (1001) ...
Adding new user `jainish' (1001) with group `jainish' ...
Creating home directory `/home/jainish' ...
Copying files from `/etc/skel' ...
Enter new UNIX password:
Retype new UNIX password:
passwd: password updated successfully
Changing the user information for jainish
Enter the new value, or press ENTER for the default
    Full Name []: jainish
    Room Number []: 25
    Work Phone []: 1
    Home Phone []: 0
    Other []: 0
Is the information correct? [Y/n] y
root@osboxes:/#
```

```
root@osboxes:/# ftp 127.0.0.1
Connected to 127.0.0.1.
220 (vsFTPd 3.0.2)
Name (127.0.0.1:osboxes): jainish
331 Please specify the password.
Password:
230 Login successful.
Remote system type is UNIX.
Using binary mode to transfer files.
ftp> pwd
257 "/home/jainish"
ftp> mkdir "practical-jainish"
257 "/home/jainish/practical-jainish" created
ftp> bye
221 Goodbye.
root@osboxes:/#
```

User jainish has been added successfully

A directory is successfully created under jainish
